Research Interests

My research aims to develop AI and data science algorithms for applications with strong societal impact, such as drug discovery, misinformation, and climate change. For this, I am particularly interested in developing flexible algorithms that can be applied to diverse types of data. These include novel **reinforcement learning** algorithms, **graph neural networks**, and **diffusion-based** models. My general interests include artificial intelligence, data science, deep reinforcement learning, and applied deep learning. I have previous research experiences in speech synthesis, natural language processing, and robotic applications using continuous control.
